

 **Superpowers
for your workflows**
**Create a  kestra.plugin
100% generated by AI**

What is a workflow?

*Fundamental unit of orchestration.
It defines a set of tasks, their execution order,
inputs, outputs, and orchestration logic.*

What is orchestration?

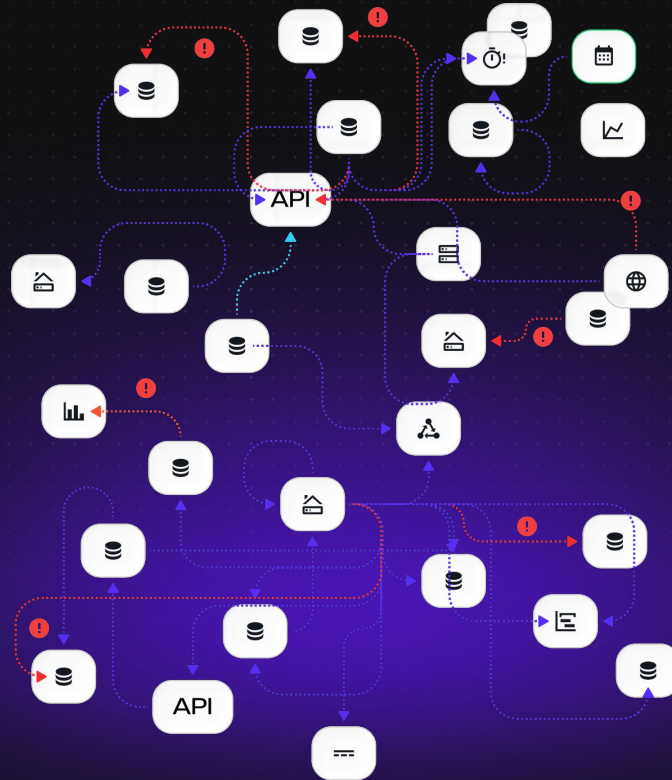

Connect disparate systems

Extract, transform and load data at scale

Manage autonomous agents

Modern orchestration is broken

Nice to meet you! 🖐️

François Delbrayelle

Lead Software Engineer @ Kestra

 <https://github.com/fdelbrayelle>

What is Kestra?

Open-source core

Enterprise Edition

Kestra Cloud

Plugins & Ecosystem

What is Kestra?

10 000+ Organizations

2 Billion Flows executed in 2025

27 000 GitHub Stars ★ [kestra-io/kestra](https://github.com/kestra-io/kestra)

1 300+ OSS contributors

Why Kestra is so unique?

Unified Interface

Declarative & Agnostic

Event-Driven

High Scale: *Run anything, anywhere*

One Platform, Infinite Use Cases

AI: LLM inference chains and agent lifecycles

Data Engineering: Robust pipelines and delivery

Infrastructure: Cloud and Platform Ops

Built for Every Team

Platform Engineers: Standardize automation

Data Engineers: Build reliable pipelines

Software Engineers: Integrate background automation into apps

What is a plugin?

*Plugins power every task and trigger in Kestra.
They wrap external systems, expose
orchestration primitives, and let you extend the
platform with custom code.*

Plugins

10% most used plugins by 90% of the users

1500+ plugins: kestra.io/plugins

Everything is a plugin

AI Maturity Level

LEVEL	LABEL	DECISION MAKER	CHARACTERISTIC
L5b	Self-Authoring	AI creates new agents	Writes, tests, and deploys agent roles
L5a	Self-Optimizing	AI updates instructions	Updates prompts / orchestration logic
L4b	Autonomous	AI, unsupervised	Same as L4a but no human gate
L4a	Supervised Agentic	AI, human bounds	Dynamic next-steps; multi-agent; gates
L3	Scripted	Human designed flow	Deterministic; fixed step order
L2	Augmented	Human, AI suggestions	Copilot, autocomplete, basic API calls
L1	Manual	Human, every time	Prompts typed into web UI; no integration

« Talk is cheap.
Show me the code. »

« Code is cheap.
Show me the talk? »

3000 lines of markdown

Product/Software Engineer in the loop

writes the issue

/kestra-plugin-plan

How much does 1 session/issue cost?

~21,5K input tokens for skills/agents definition

~340K input / ~30K output tokens

~\$1.65 w/ Opus plan, Sonnet for the rest 

Developer agent + QA ~70% total input tokens

How could we improve?

Plan refinement loop

Support more complex QA

Monitor CI after PR creation

Go to the next levels (L4b-L5a)?

Thank you! Any Questions?
